

CALLING ALL MEN OVER 40

When was the
last time you
checked your
prostate health?

What is a PSA test?

- PSA stands for prostate-specific antigen, a protein produced by prostate cells.
- A PSA test is a blood test that measures how much PSA is in your blood.
- A raised PSA level may indicate a prostate issue such as (but not necessarily) benign enlargement, prostatitis, or prostate cancer.

Why get a PSA test?

It can provide warning signs early,
long before symptoms appear,
giving you more treatment
options and a better chance of
successful treatment.

The PSA test is minimally invasive
- just a blood draw from the arm.

Where can I get a PSA test?

You can ask your GP.

Alternatively, we are a charity that organise PSA & health testing events in local communities all over the UK. We also offer home testing kits.

Some of our testing events are free, some cost £20-30 per test, depending on the charity organiser.

How does your testing work?

You can find an event near you on our website. Register for a free account, book online, attend the event where one of our nurses will take a simple blood test, and you'll receive your results online within 72 hours.

Our home testing kits use a self-collection blood sample, analysed by the same trusted laboratory partners who process our event tests.

EARLY DETECTION SAVES LIVES
